SUMMARY

Software Engineer with 4+ years at Intuit and Zoho, building full-stack web applications and microservices using React.js, Python, Node.js, and AWS. Currently integrating GenAI (LangChain, GPT-4, RAG pipelines) into financial platforms serving 100K+ users. Experienced in API design, database optimization, CI/CD automation, and shipping reliable systems in Agile teams.

SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), Java, SQL, HTML5, CSS3

Frontend: React.js, Redux, React Router, Next.js, Tailwind CSS, Material UI, Bootstrap, Performance Optimization

Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, GraphQL, WebSockets, OAuth2, JWT, Microservices, System Design

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS, EKS, Kinesis, DynamoDB, CloudWatch, CodePipeline), Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Spinnaker, CI/CD

Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Apache Kafka, Snowflake, Airflow

AI / GenAI: LangChain, OpenAI GPT-4, RAG Pipelines, Hugging Face Transformers, Pinecone, Prompt Engineering

Testing & Observability: Jest, Mocha, Cypress, Postman, Swagger, Prometheus, Grafana, Splunk, SonarQube

EXPERIENCE

Software Engineer | Intuit, Inc.

Jan 2025 - Present

- Build and maintain Python (FastAPI) microservices and React.js frontend for an AI-powered financial platform processing 10K+ daily transactions across billing, payroll and invoicing, scaling the system to serve 100K+ active users.
- Integrate Generative AI models (GPT-4, BERT) via LangChain into cash flow forecasting and invoice optimization, boosting user retention by 17% through personalized financial insights.
- Containerize services with Docker on AWS ECS and architect CI/CD pipelines (Spinnaker, CodePipeline) with a 6-engineer team, improving uptime from 99.2% to 99.8% and cutting deploy time from 4 hours to 25 minutes.

Software Engineer | Zoho Corporation

Jun 2020 - Aug 2023

- Developed a multi-tenant SaaS purchase order system serving 500+ enterprise clients, reducing manual procurement time by 30% and increasing order accuracy by 18%.
- Engineered 4 production REST APIs (Order, Vendor, Approval, Reporting) using Node.js and Express, reducing API latency by 12% and increasing throughput by 8%.
- Designed 20+ reusable React components and role-based analytics dashboards, improving task completion efficiency by 15% and cutting approval turnaround by 12%.
- Optimized MySQL and PostgreSQL across 2M+ records using Python scripts for indexing analysis and schema refactoring, improving overall query and report performance by 14%.

PROJECTS

GenAI Document Intelligence (RAG Pipeline) | Python, FastAPI, LangChain, GPT-4, Pinecone, AWS Lambda | 2024

- Built a RAG platform for natural-language document querying with 92% answer accuracy. Async FastAPI backend with LangChain achieves <1.5s latency, deployed serverless on Lambda at 40% lower cost.
- Implemented Pinecone vector search with OpenAI embeddings for semantic retrieval across 10K+ documents, with SSE streaming to React.js frontend and source citations for every response.

Real-Time Fintech Dashboard | React, TypeScript, Kafka, PostgreSQL, Redis, AWS EKS | 2024

- Engineered a real-time analytics dashboard over Kafka with sub-100ms latency for anomaly detection. Redis caching and read replicas reduced DB load by 45% and enabled 3x concurrent user growth.
- Developed portfolio tracking and P&L reporting modules with React and TypeScript, using WebSockets for live data feeds and Prometheus + Grafana for full pipeline observability.

EDUCATION

M.S. Computer Science | University of Central Missouri

Aug 2023 - May 2025

GPA: 3.4/4.0 | Coursework: Distributed Systems, Machine Learning, Cloud Computing, Database Systems

B.S. Computer Science | JNTUK, Andhra Pradesh, India

Aug 2017 - Jun 2021
